
DATA FLOW DIAGRAMS

Professor Matt Germonprez
ISQA3420

WHO WANTS TO HAVE SOME FUN?

DATA FLOW DIAGRAMS

- They are the flow of data.
Nothing more, nothing less.
- They are a pain to make but once they are made, they are very explicit and helpful in the development process

SQUIRREL PROJECT

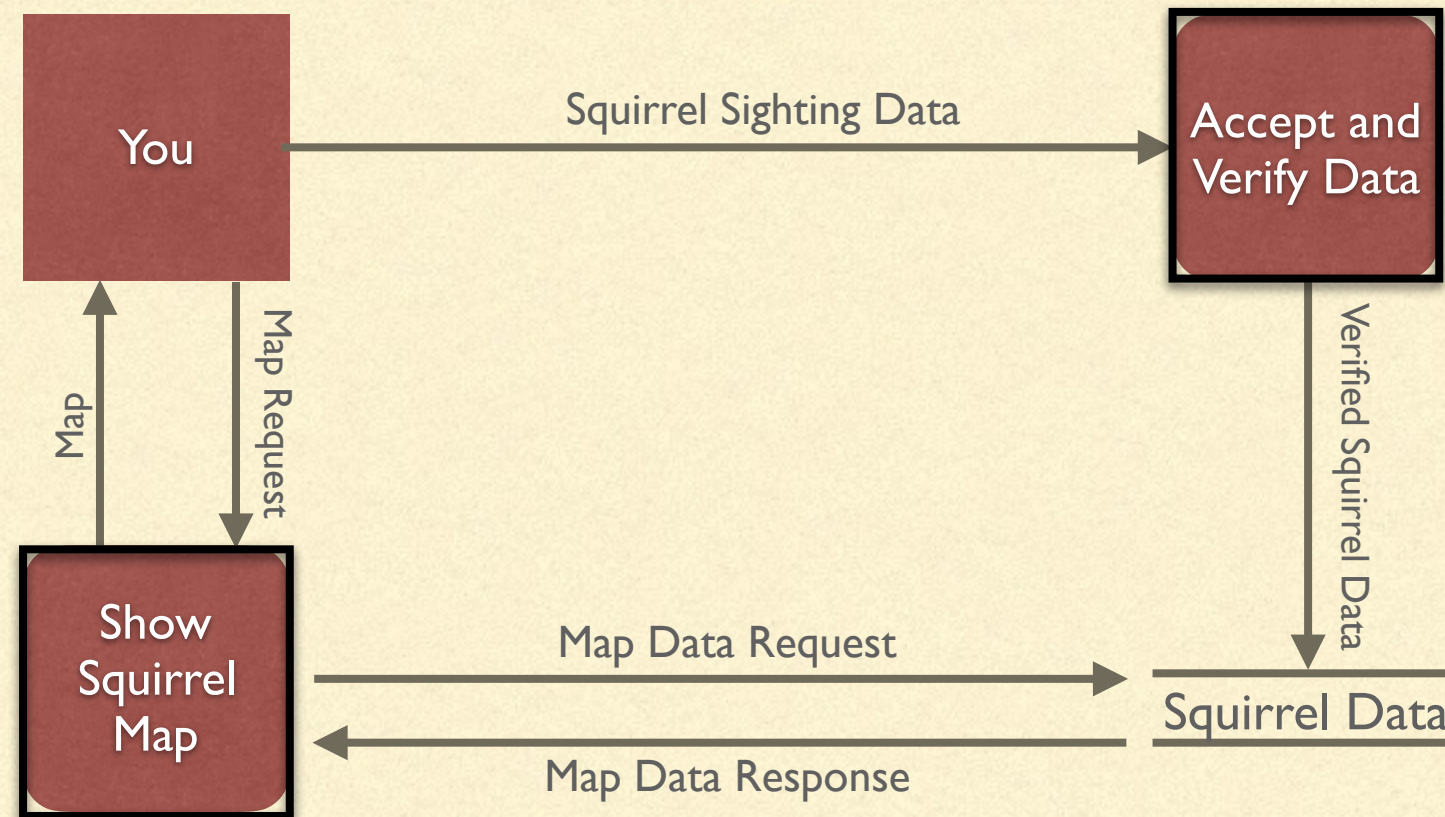

- Observe and identify a squirrel
- Send the results to the squirrel project
- Observe results on an interactive map
 - Type of squirrel
 - Location of squirrel
 - Date/time of sighting

NOTES ON THE DFD

- The arrows are data, not processes (do not use verbs).
- If the data is not transformed in a process it should be the same name coming in as going out of a process
- You can break down processes for a long time. As you do this, there are likely corresponding changes with the data flows.

GET THIS IMAGE UP TO GITHUB

Use the approach I just showed you. Make sure you close your issue too.

Send me an email with a link to your repo by Friday September 2nd so that I can see you uploaded this image and opened/closed an issue (+1 points)

HAVE A GREAT WEEKEND!!
